

AMENDMENT TO THE CLAIMS

1. (Currently Amended) A system, comprising:
 - a memory for storing a media file;
 - a host computer;
 - a personal communication device, said personal communication device having access to said memory and said personal communication device being adapted to transmit the media file to said host computer;
 - means accessible to said host computer for modifying the media file; [and]
 - means for storing the modified media file[.];
 - a media switch matrix for routing the media file to said modifying; and
 - a media interface device control repeater for selecting one of a predetermined plurality of modifications to be performed by said modifying means.
2. (Original) The system of claim 1 wherein said host computer is adapted to transmit information to said personal communication device.
3. (Original) The system of claim 2 wherein said host computer is adapted to receive the media file from said personal communication device over the Internet.
4. (Original) The system of claim 2 wherein said host computer is adapted to receive the media file from said personal communication device over a private network.
5. (Original) The system of claim 1 wherein said host computer is adapted to receive a media file that is in any one of a plurality of predetermined formats.
6. (Original) The system of claim 1 wherein said modifying means includes a media patchbay and a media interface device.

7. (Cancelled)

8. (Currently Amended) The system of claim [7] 1 wherein said media interface device control repeater comprises means for receiving a control signal from said host computer and means for sending multiple outputs to said modifying means.

9. (Currently Amended) The system of claim [7] 1 wherein said media switch matrix comprises means for routing said media file through said media switch matrix a plurality of times.

10. (Original) The system of claim 1 wherein said host computer is adapted to receive a media file that is a video file.

11. (Original) The system of claim 1 wherein said host computer is adapted to receive a media file that is an audio file.

12. (Original) The system of claim 1 wherein said host computer is adapted to receive a media file that is a music notation file.

13. (Cancelled)

14. (Currently Amended) A system, comprising:
a memory for storing a media file;
a personal communication device, said personal communication device having access to said memory;
a host computer;
a network to allow communication from said personal communication device to said host computer and from said host computer to said personal communication device; [and]
means accessible to said host computer for transforming said media file;

a media switch matrix for routing the media file to said transforming means; and
a media interface device control repeater for selecting one of a predetermined
plurality of transformations to be performed by said transforming means.

15. (Original) The system of claim 14 wherein said transforming means includes a media patchbay and a media interface device.

16. (Cancelled)

17. (Currently Amended) The system of claim [16] 14 wherein media interface device control repeater comprises means for receiving a control signal from said host computer and means for sending multiple outputs to said transforming means.

18. (Cancelled)

19. (Cancelled)

20. (Cancelled)

21. (Cancelled)

22. (Cancelled)

23. (Cancelled)
